GERMAN DELEGATION

COCOM DOCUMENT 3624
Paris, July 20, 1959MEMORANDUMBY THE GERMAN DELEGATION ON THE EXPORTTO POLAND OF WOVEN NICKEL WIRE MESH

The German authorities have received a request for the delivery of

450 m² pure woven nickel wire mesh,
covered by item 10 AEL,
in the value of 10.514%

The woven nickel wire mesh will be used by the Strylon-Plant in Warsaw, a producer of stockings made of artificial silk.

The producer of the woven nickel wire mesh sells this material to many plants for artificial silk and has received the order during a visit, made in Warsaw, and has cleared there the technical details of this order.

The woven nickel wire mesh will be cut in parts of 60 mm diameter and is needed for the manufacturing of synthetic fibres for the filtration of raw material. The wire mesh for the need of the Polish plant has been purchased until now in Switzerland, during the visit in Warsaw, when the German businessman sold a quantity of non-embargoed goods, he received the order for the woven nickel wire mesh.

The German authorities have received all assurances against re-export and would therefore grant the license if no objection is raised. They submit the request on an ad hoc-basis and would like to hear the view of the Committee until the 27th of July 1959.
